

Xray Patients: Please Review

In order to protect our vulnerable patients from COVID-19, we are reducing the number of patients visiting the hospital, effective immediately.

During this outbreak, we are no longer performing elective imaging studies. Examples of elective xray studies are listed below. If you are here for a non-urgent, xray, the clerk has been instructed to send you home. Please follow-up with your referring doctor to determine next steps.

Thank you for your help in protecting our patients

Immediate Outpatient Xray Postponement

Alignment/Deformity	Non-surgical Abdominal pain
Arthritis	Non-Traumatic Muskuloskeletal
